## Cultural dimensions of Hofstede

b) Discuss the cultures involved using the **individually completed tables** (see previous point) on this basis, agree to cover only four out of the six dimensions in your coursework those that you find most insightful for comparison. During the presentation, **briefly explain why you chose these four and not the other two.**

- **Chosen Dimensions:** We chose these four dimensions because they represent the most significant 'cultural gaps' between the societies we are studying. They provide the clearest explanation for differences in family life, economic behavior, and social happiness.
- **Omitted Dimensions:** uncertainty Avoidance (UAI) and Long-Term Orientation (LTO).
  - **UAI:** Sri Lanka and Cameroon share similar lower-to-moderate risk profiles; both cultures manage uncertainty through communal networks and resilience rather than rigid institutional planning.
  - **LTO:** High conceptual overlap with the Collectivism and Achievement axes, leading to analytical redundancy.
- **Only thing remaining is the individually completed tables.**
