1 Introduction

In terms of sustainable development, Cameroon is currently ranked **135th** out of **169** countries, with a sustainable development Goal Index score of **57.6**% in accordance to the sustainable development report of 2025. The figure below illustrates the current situation of Cameroon in regards to the **17** Sustainable Development Goals.

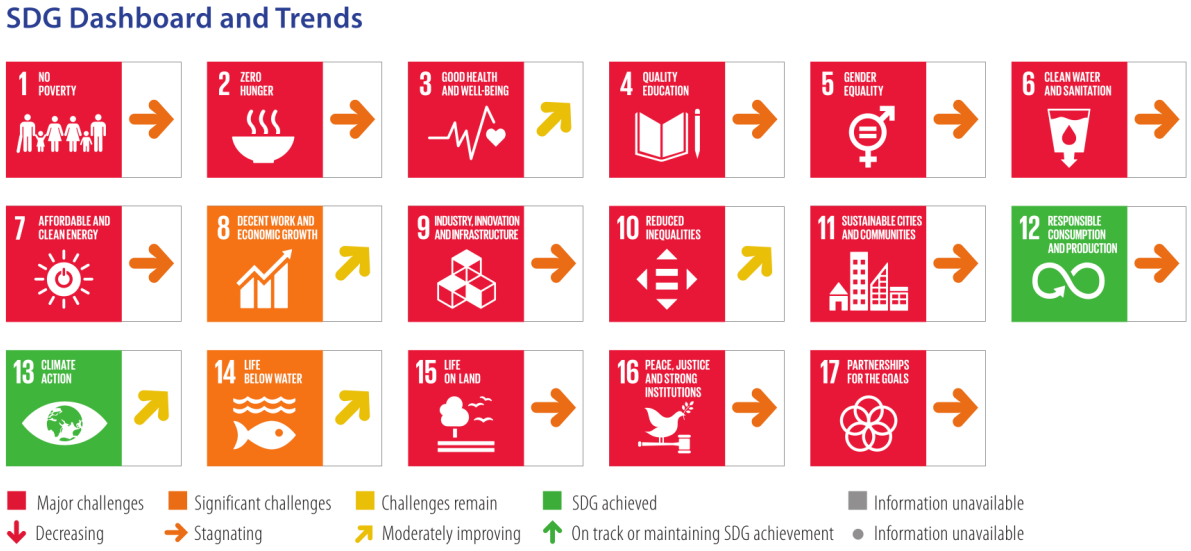

Figure 1: Cameroon SDG Dashboard and Trends

The country has achieved two sustainable development goals namely: SDG 12: **Responsible Consumption and Production** and SDG 13: **Climate Action**. SDG 14 shows some challanges remaining while SDG 8 shows significant challenges remaining in order to achieve their sustainable development goal. The remaining SDGs are facing Major challenges and very far from the sustainable development goal.

My interest will be on SDGs 7(**Affordable and Clean Energy**), 9(**Industry Innovation And Infrastructure**) and 11(**Sustainable Cities And Communities**) as this is where I'm able to contribute solution ideas to the challenges.

2 SDG 7: Affordable and Clean Energy

This sustainable development goal aims at ensuring access to affordable, reliable, sustainable and modern enrgy for all. As earlier mentioned, Cameroon is facing Major challenges regarding the affordability and cleanliness of the energy consumed in the country. The sustainability development report shows a stagnation or increasing at a rate of less than **50%** of the required rate towards the goal. This is proven through the stagnating and low trending indicators below.

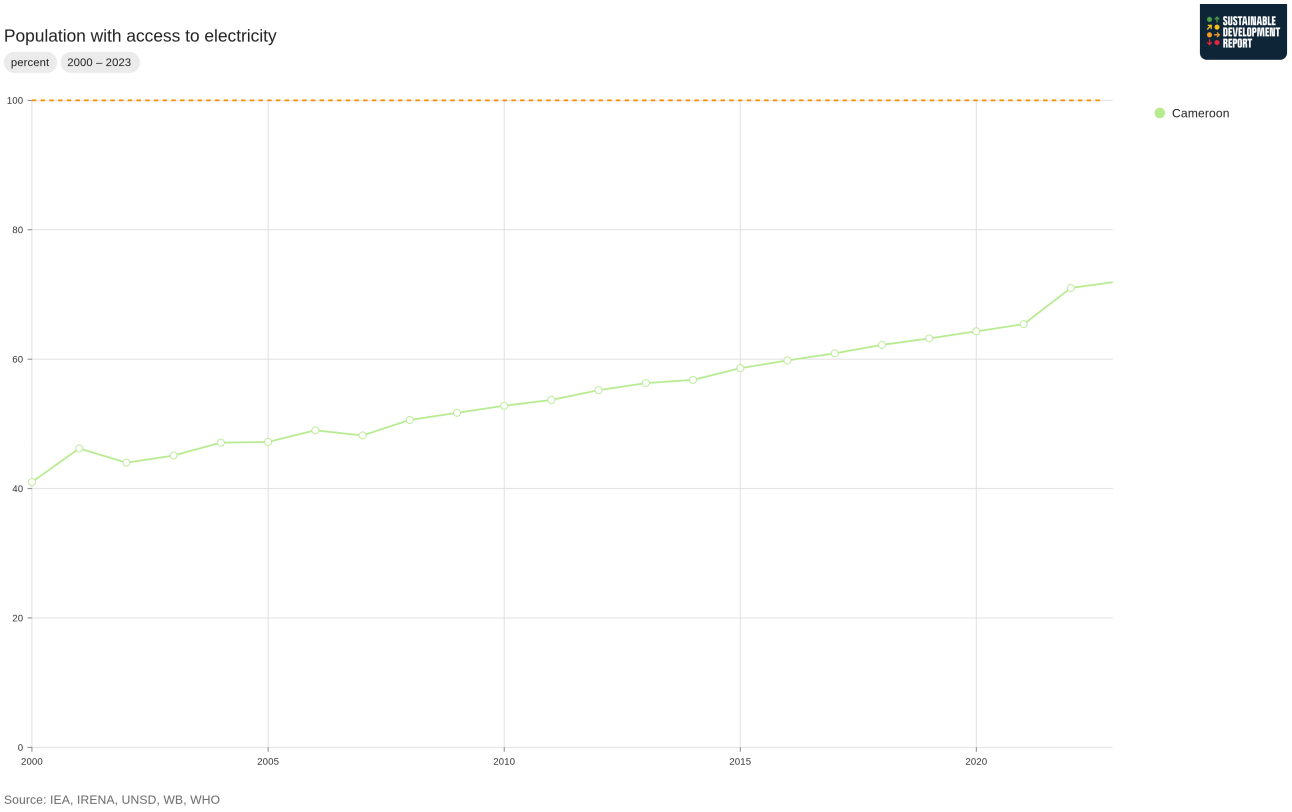

Figure 2: Population with access to electricity

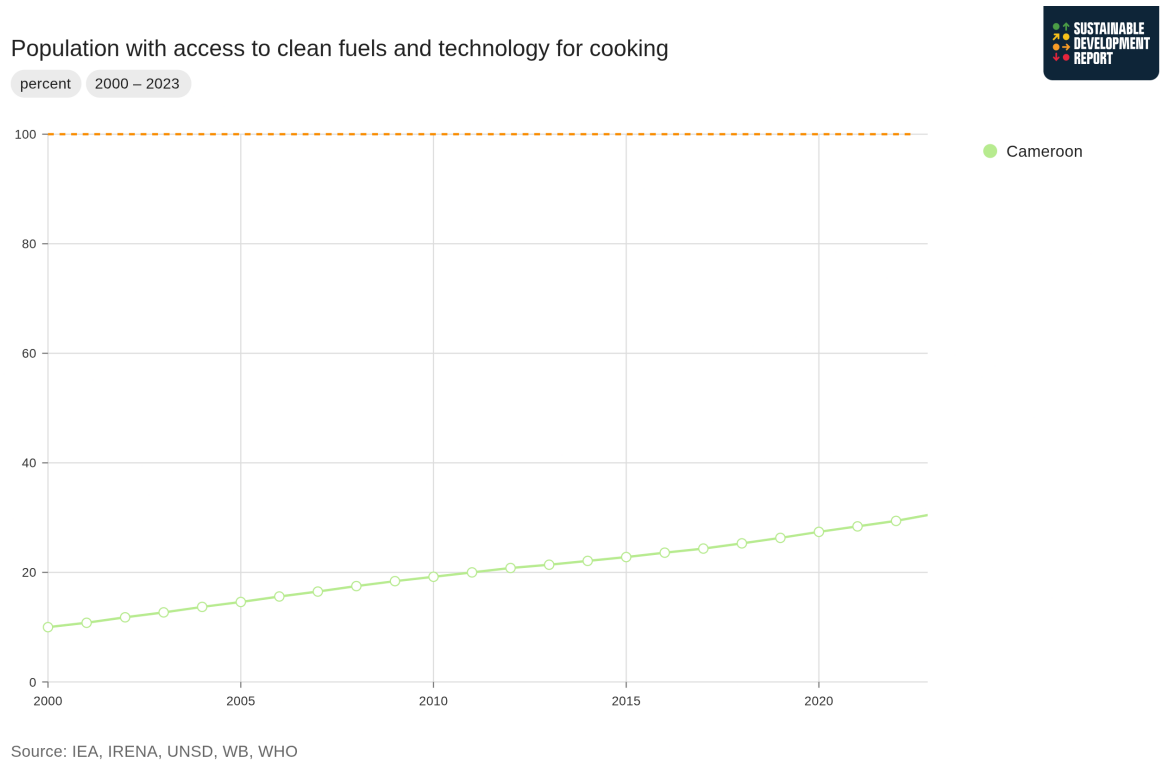

Figure 3: Population with access to clean fuels and technology for cooking

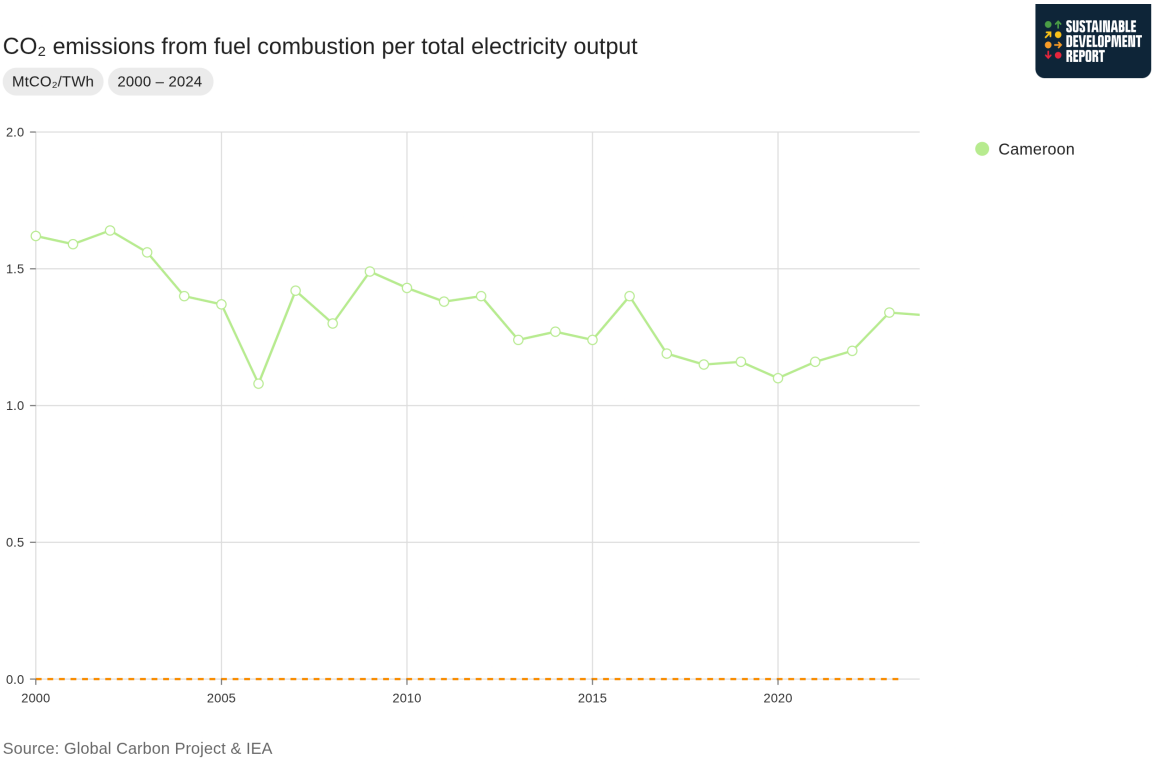

Figure 4: CO_2 emissions from fuel combustion per total electricity output

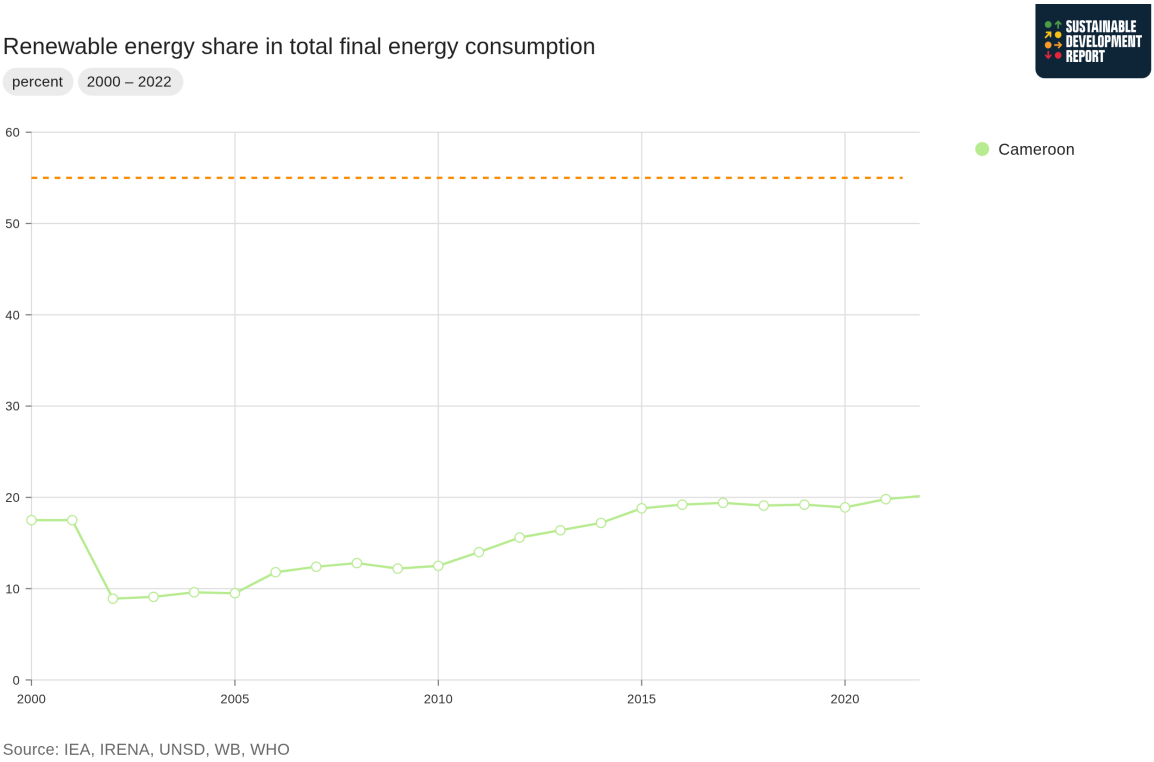

Figure 5: Renewable energy share in total final energy consumption

2.1 Indicator: Population with access to clean fuels and technology for cooking

From the above indicators, having a closer look into this indicator reveals connections to other SDGs.

Given the hazardous cooking conditions in which low income household in Cameroon cook in, a possible solution idea to better the condition is through the use of **LPG Liquified Petroleum Gas**. Essentially easing the access to LPG and making it a cheaper or perhaps equally affordable option for such households.

The company **PayGo Energy** has found a solution to easing the access of LPGs in low income households in Kenya. The cooking conditions in low income household in Kenya is pretty similar to the ones in Cameroon. So extending this solution idea or the company itself is a solution for the hazardous cooking conditions.

Another solution idea would be through the collection of biomass and using that as fuel. Given that some regions of the country mainly the northern part of the country practice a lot of animal raring from cows to sheeps and goats from which biomass could be sourced from.

3 SDG 9: Industry Innovation and Infrastructure

SDG 9 is about Building resilient infrastructure, promote inclusive and sustainable indsutrialization and foster innovation. This is another challenge Cameroon is currently facing as they are stagnating or increasing at less than **50**% of the required rate. There are several stagnating and low trending indicators proving this to be a challenge to the country's sustainable development.

- Rural population with access to all-season roads
- Population using the internet
- Mobile broadband subscriptions
- Logistics Performance Index: Infrastructure Score
- Score of top 3 universities in Times Higher Education
- Articles published in academic journals
- Expenditure on research and development
- Total patent applications by applicant's origin
- E-government: Online Services Index

3.1 Indicator: Total patent applications by applicant's origin

The focus point would be directed at this indicator.
